Aptiv is ready when and where you need us

The partner of choice for the race to electrification

Making Mobility Greener

We envision a world with zero emissions. Making the future of mobility greener is at the heart of our mission.

With 20 years of field-proven expertise in automotive-grade high-voltage solutions, we design, develop and deliver connection systems for electrified vehicles.

Aptiv engineers understand how to optimize the electrification system to match the overall vehicle architecture and adapt each component to customer-specific design requirements.

Our broad portfolio covers the full spectrum of architecture electrification solutions, delivering power from the grid to the systems that need it most. We follow the power.

System-Level Knowledge

Everything in the Aptiv electrification portfolio – from high-voltage electrical connectors to charging cordsets and inlets – benefits from the knowledge, experience, research and know-how that goes into everything Aptiv builds for the system.

Did you KNOW?

Hybrid and electric vehicles are creating a host of challenges, including the demand for a new generation of high performance, high

power connectors and charging solutions. Many additional power electronics devices are added to the vehicle architecture including lithium-ion (Li-ion) batteries, inverters and DC (Direct Current) converters. Their impact on connector design results in handling operation voltages that range from 400V up to 1000 V and carrying currents as high as 250A.

Why is vehicle electrification now a reality?

ENVIRONMENTAL
CONCERNS

GOVERNMENT
REGULATIONS AND
INCENTIVES

IMPROVING ECONOMIC
STANDARDS

Driven by environmental concerns and a combination of government regulations and incentives, the market for EVs (Electric Vehicles) and HEVs (Hybrid Electric Vehicles) is now becoming a reality. In addition, EVs and HEVs reduce the dependence on potential oil price increases.

Aptiv is currently driving the innovations required for future multi-voltage architectures. Our research and development teams have leveraged the lessons learned from the collaboration with OEM's to focus on technological excellence and to provide real-life electrification performance.

With a unique expertise in architecture optimization and systems integration, Aptiv has created one of the most comprehensive portfolios of the high power connection systems.

Superior Sealing Performances

All of our mated connection systems feature at least external IP67 sealing performance.

To ensure optimum sealing performance, our connectors are designed for the harshest conditions due to a back sealing feature.

Superior Shielding Performances

EV and HEV electrical and electronic systems generate unwanted electromagnetic interference (EMI) which radiate from the interconnecting cables. The connection systems are designed by minimizing the paths along which these signals can escape. Our connectors and cabling designs provide high levels of shielding effectiveness to ensure EMI free performance of the complete system.

Superior Safety Performances

Our connectors provide finger-proof, 2-step disconnection technologies to guarantee optimum safety during all handling operations. They continue to meet with changing requirements of the OEM's in regard to HVIL on a vehicle system and connection system level. Additionally, our ErgoMate™ axial mating system helps achieve a lower profile solution while reducing mating forces. Our solutions offer position assurances in multiple options including: CPA (Connector Position Assurance), TPA (Terminal Position Assurance) and SPA (Screw Position Assurance).
